Lettuce

- Python için bir Behaviour Driven Development aracıdır.
- Lettuce, **Ruby** camiasındaki **Cucumber**'dan esinlenmiştir.
- Senaryolar için **Gherkin** adında bir DSL kullanır.

Amacı

- Test logic'ini ve senaryoları birbirinden ayırır.
- Testlerin implementation'dan ziyade user story güdümlü olması.
- Kodlama bilgisi olmayanların testleri geliştirebilmesine olanak tanınması.

örnek

Feature: **Commenting** on documents

In order to discussing **with** the other users,

As an authenticated user,

I want to comment on a pattern

Scenario: users can comment on documents

Given I am logged **in as** user **"tester"**

And I create a pattern that named **"Comment Model"**

When go to the that pattern

And I type the **"body"** **as** **"Test Comment"**

When I submit the comment

Then the comment count of that pattern should be **1**

Konzeptler

Feature

Uygulamanın test edilecek özellikleridir.

Örnek: Kullanıcının bir fotoğrafa yorum girebilmesi.

Scenario

Bir özelliği çeşitli senaryolar ile test edersiniz.

Örnek: Kullanıcı sisteme bağlı değilken yorum girip girememesi.

Step

Senaryoları oluşturan adımlardır.

Örnek: Kullanıcının fotoğraf sayfasına gelmesi.

Kurulum

pip install lettuce

/home/foo/projects/foobar-app

- app.py (flask, django, ya da başka bir şey)

- + tests

- + features

- steps.py (adım tanımlamalarınız)

- login.feature (senaryolar)

- photos.feature (senaryolar)

senaryolarımızı oluřturalım

feature

Feature: Login mechanism

In order to see my dashboard
As an anonymous user,
I want to login

Scenario: Login from homepage

Given I am an anonymous user
And I go to homepage
When I type “fatih” as username
And I type “123” as password
When I submit the form
Should I see “My dashboard” text on homepage

steps.py

```
from lettuce import step, world
```

```
@step('When I "(.*)" as username')
```

```
def set_username(step, username):  
    world.username = username
```

```
@step('When I "(.*)" as password')
```

```
def set_password(step, password):  
    world.password = password
```

```
@step('I submit the form')
```

```
def submit(step):  
    world.login_is_done = (  
        world.username == "fatih" and  
        world.password == "123"  
    )
```

```
@step('I see "My dashboard" text on homepage')
```

```
def homepage(step):  
    assert world.login_is_done
```
